

## Worksheet Answers by Robert Myers

### Worksheet Week 8, 03 - Local images and linking pages

#### Comparing local and online images and links

Online images:

```

```

Local images:

```

```

As with links, you can also display images stored inside your website folder. When you do this, you are saving them locally on your computer/web server as opposed to hosted on externally.

The format for displaying a local image is shown below:

```

```

When saving, give the file a meaningful and simple name such as pizza.png (if the pic is of a pizza).

Ensure that you are aware of the file extension of your image (png, jpg, gif, jfif, webp, etc.).

Ensure that you definitely save the image into the same folder as your HTML files.

Online links:

```
<a href="http://www.google.co.uk"> Google </a>
```

Local links:

```
<a href="index.html"> Home </a>
```

#### Please enter your Code for Page 1

## This is a title

This is some text, designing a website is kind of hard!

[Home](#) [Page 2](#) [Page 3](#)  Pizza

#### Task – Making other pages and linking them

1. Create two new pages and save them with the names page2.html and page3.html.

You can copy and paste some of the code from your first page if you wish.

The code to create working links to your pages is shown below:

```
<a href="index.html"> Home </a>
```

```
<a href="page2.html"> Page 2 </a>
```

```
<a href="page3.html"> Page 3 </a>
```

2. Display your links as a bulleted (unordered) list.

## Code for Page 2

# This is Page 2

This is some text

- [Home](#)
- [Page 2](#)
- [Page 3](#)

## Code for Page 3

# This is Page 3

This is some text

- [Home](#)
- [Page 2](#)
- [Page 3](#)

## Explorer task

1. Can you create buttons (instead of text) that link to the other pages?
2. Can you make a banner for your website?
